The complexity of modern computer networks and systems, combined with the extremely dynamic environments in which they operate, is beginning to outpace our ability to manage them. Taking yet another page from the biomimetics playbook, the autonomic computing paradigm mimics the human autonomic nervous system to free system developers and administrators from performing and overseeing low-level tasks. Surveying the current path toward this paradigm, *Autonomic Computing: Concepts, Infrastructure, and Applications* offers a comprehensive overview of state-of-the-art research and implementations in this emerging area. This book begins by introducing the concepts and requirements of autonomic computing and exploring the architectures required to implement such a system. The focus then shifts to the approaches and infrastructures, including control-based and recipe-based concepts, followed by enabling systems, technologies, and services proposed for achieving a set of "self-*" properties, including self-configuration, self-healing, self-

optimization, and self-protection. In the final section, examples of real-world implementations reflect the potential of emerging autonomic systems, such as dynamic server allocation and runtime reconfiguration and repair. Collecting cutting-edge work and perspectives from leading experts, *Autonomic Computing: Concepts, Infrastructure, and Applications* reveals the progress made and outlines the future challenges still facing this exciting and dynamic field.

Feel great inside and out with the ground-breaking anti-diabetes lifestyle plan which helped Tom Watson transform his life and inspired his book *Downsizing* 'A book which has changed my life and which has the power to change the lives of millions' TOM WATSON 'I am obsessed. . . I feel leaner, energised, less bloated and more healthy. I genuinely feel like this is no longer a diet plan, it's just the way I eat' SARA COX _____ In the tiny Italian village of Pioppi, they live simple but long and healthy lives. But there is no gym, no supermarket, the food is delicious and they enjoy a glass of wine every evening. Cardiologist and world-leading obesity expert Dr Aseem Malhotra & Donal O'Neill have combined the wisdom of this remarkably long-living population with decades of nutrition and medical research to cut through dietary myths and create this easy-to-follow lifestyle plan. This is NOT a diet or lifestyle which requires saying 'no' to the things you love, or exercising for hours upon end. In just three weeks, The Pioppi Diet will help you make simple, achievable and long-lasting changes to how you eat, sleep and move. You'll still be able to indulge in delicious food while enjoying a healthier life CREAMY CRAB and RICOTTA OMELETTE with SLICED AVOCADO · GRILLED HALLOUMI and KALE SALAD with TAHINI YOGHURT DRESSING · STEAK BURGER with MATURE CHEDDAR, TOMATO and AVOCADO · CAULIFLOWER STEAKS and CRUMBLLED FETA, ZA'ATAR and CHILLI _____ 'A must have for every household' Professor Dame Sue Bailey, the Chair of the Academy of Medical Royal Colleges 'Revolutionary' Richard Thompson, former physician to HRH Queen Elizabeth 'This book has the power to make millions of people healthier and happier.' When the renowned trumpeter and bandleader Miles Davis chose the members of his quintet in 1955, he passed over well-known, respected saxophonists such as Sonny Rollins to pick out the young, still untested John Coltrane. What might have seemed like a minor decision at the time would instead set the course not just for each of their careers but for jazz itself. *Clawing at the Limits of Cool* is the first book to focus on Davis and Coltrane's musical interaction and its historical context, on the ways they influenced each other and the tremendous impact they've had on culture since then. It chronicles the drama of their collaboration, from their initial historic partnership to the interlude of their breakup, during which each man made tremendous progress toward his personal artistic goals. And it continues with the last leg of their journey together, a time when the Miles Davis group, featuring John Coltrane, forever changed the landscape of jazz. Authors Farah Jasmine Griffin and Salim Washington examine the profound implications that the Davis/Coltrane collaboration would have for jazz and African American culture, drawing parallels to the changing standards of African American identity with their public personas and private difficulties. With vastly different personal and musical styles, the two men could not have been more different. One exemplified the tough, closemouthed cool of the fifties while the other made the transition during this time from unfocused junkie to a religious pilgrim who would inspire others to pursue spiritual enlightenment in the coming decade. Their years together mark a watershed moment, and *Clawing at the Limits of Cool* draws on both cultural history and precise musical detail to illuminate the importance that their collaboration would have for jazz and American history as a whole.

International environmental agreements have increased exponentially within the last five decades. However, decisions on policies to address key issues such as biodiversity loss, climate change, ozone depletion, hazardous waste transport and numerous other planetary challenges require individual countries to adhere to international norms. What have been the successes and failures in the environmental treaty-making arena? How has the role of civil society and scientific consensus contributed to this maturing process? Why have some treaties been more enforceable than others and which theories of international relations can further inform efforts in this regard? Addressing these questions with renewed emphasis on close case analysis makes this volume a timely and thorough postscript to the Rio-Plus 20 summit's celebrated invocation document, *The Future We Want*, towards sustainable development. *Environmental Diplomacy: Negotiating More Effective Global Agreements* provides an accessible narrative on understanding the geopolitics of negotiating international environmental agreements and clear guidance on improving the current system. In this book, authors Lawrence Susskind and Saleem Ali expertly observe international environmental negotiations to effectively inform the reader on the geopolitics of protecting our planet. This second edition offers an additional perspective from the Global South as well as providing a broader analysis of the role of science in environmental treaty-making. It provides a unique contribution as a panoramic analysis of the process of environmental treaty-making.

Environmental Pollution, Biodiversity, and Sustainable Development: Issues and Remediation provides an extensive summary of biodiversity. It is the result of the assistance of environmentalists, researchers, policy experts, and academicians from across the globe sharing their research and knowledge on biodiversity and ways to mitigate the threat from climate change, over-utilization of natural resources, pollution, and more. The volume considers that biodiversity encompasses a wide range of biological processes, ranging from genetic diversity, species, populations, communities and ecosystems to landscapes and regions. This book, written by a panel of international experts in biodiversity, conservation biology, and evolution from different countries, including Iran, Pakistan, India, Bangladesh, Tajikistan, Russia, and others, highlights the human impact on biodiversity hotspots on a global

scale. The volume provides an abundance of valuable research for faculty, students, and researchers in environmental sciences, government agencies, and many others.

"As the race for resources in distant parts of the planet gathers momentum, most discussion has centered on the potential for conflict, environmental destruction, and upheaval from climate change. This important book shifts the conversation about the Arctic and Antarctic from conflict to cooperation. A multidisciplinary roster of experts provides fresh views of the polar regions, focusing on diplomacy and the potential for cooperative international decision-making. Collectively the contributors illustrate the breadth of issues that complicate governance in the Arctic and Antarctic, as well as parallels and differences between the politics of the two poles"--

From sun-baked Black Mesa to the icy coast of Labrador, native lands for decades have endured mining ventures that have only lately been subject to environmental laws and a recognition of treaty rights. Yet conflicts surrounding mining development and indigenous peoples continue to challenge policy-makers. This book gets to the heart of resource conflicts and environmental impact assessment by asking why indigenous communities support environmental causes in some cases of mining development but not in others. Saleem Ali examines environmental conflicts between mining companies and indigenous communities and with rare objectivity offers a comparative study of the factors leading to those conflicts. Mining, the Environment, and Indigenous Development Conflicts presents four cases from the United States and Canada: the Navajos and Hopis with Peabody Coal in Arizona; the Chippewas with the Crandon Mine proposal in Wisconsin; the Chipewyan Inuits, Déné and Cree with Cameco in Saskatchewan; and the Innu and Inuits with Inco in Labrador. These cases exemplify different historical relationships with government and industry and provide an instance of high and low levels of Native resistance in each country. Through these cases, Ali analyzes why and under what circumstances tribes agree to negotiated mining agreements on their lands, and why some negotiations are successful and others not. Ali challenges conventional theories of conflict based on economic or environmental cost-benefit analysis, which do not fully capture the dynamics of resistance. He proposes that the underlying issue has less to do with environmental concerns than with sovereignty, which often complicates relationships between tribes and environmental organizations. Activist groups, he observes, fail to understand such tribal concerns and often have problems working with tribes on issues where they may presume a common environmental interest. This book goes beyond popular perceptions of environmentalism to provide a detailed picture of how and when the concerns of industry, society, and tribal governments may converge and when they conflict. As demands for domestic energy exploration increase, it offers clear guidance for such endeavors when native lands are involved.

Quality and Safety in Anesthesia and Perioperative Care offers practical suggestions for improving quality of care and patient safety in the perioperative setting. Chapters are organized into sections on clinical foundations and practical applications, and emphasize strategies that support reform at all levels, from operating room practices to institutional procedures. Written by leading experts in their fields, chapters are based on accepted safety, human performance, and quality management science and they illustrate the benefits of collaboration between medical professionals and human factors experts. The book highlights concepts such as situation awareness, staff resource management, threat and error management, checklists, explicit practices for monitoring, and safety culture. Quality and Safety in Anesthesia and Perioperative Care is a must-have resource for those preparing for the quality and safety questions on the American Board of Anesthesiology certification examinations, as well as clinicians and trainees in all practice settings.

Report describes an experiment and related tests in which treated water was injected into a fissured carbonate rock aquifer overlying a sandstone aquifer.
