To contend with China's grand strategy, the US must formulate one of its own. This starts by centering China as the main threat within the American threat environment. Current strategic documents, the National Security Strategy and the National Defense Strategy, largely fail to do this.

The COVID-19 pandemic is an acute public health and economic crisis that is further destabilizing an already weakened rules-based international system. With cooperation, determination, and resolve, however, the United States and its allies can recover from the crisis and revitalize an adapted rules-based system to bring about decades of future freedom, peace, and prosperity.

The Brookings Institution has long produced an analysis of America's defense budgets and policies. The war on terror and the ongoing operations in Iraq and Afghanistan have forced upon this country soaring defense budgets and unprecedented challenges in policymaking. In the newest installment in this tradition, leading foreign policy expert Michael O'Hanlon offers policy recommendations for strengthening the ability of America's military to respond to international crises in a tumultuous

Saddam Era. The United States can, for the foreseeable future, be confident that its armed forces will remain engaged in Iraq, as well as in Afghanistan and other theaters in the war on terror. It will also need to remain involved in deterrence missions in the western Pacific, most notably in Korea and the Taiwan Strait. It will wish to remain engaged in European security, since the capabilities and cohesion of the NATO alliance have important implications for the United States globally. O'Hanlon reviews these priorities, asking tough questions and developing

By answering them:

- What military will the United States need in the future?
- How much will it cost?
- How can the U.S. increase the size of its ground forces without increasing the size of the defense budget?
- In an era of apocalyptic terror threats, and at a time of \$400 billion defense budgets and \$400 billion federal budget deficits, how can this country protect its citizens while maintaining fiscal responsibility?

for thinking about how NATO's conventional defense strategy can be adjusted to contribute to stability in Central Europe in the coming post-Cold War era. The report (which was assembled in early 1991) concludes that NATO will need to employ a new "theater employment doctrine"--The way NATO uses military force on the battlefield to attain its goals--one that defends further eastward and more flexibly than the linear defense contemplated. only in NATO's force posture, but also in how coalition defense is conducted. Having a concerted planning effort that forges a coherent relationship among NATO's future defense strategy, employment doctrine, and force posture can ensure these changes are well-managed, thus leaving NATO with a viable conventional defense strategy even if forces are smaller than they are now.

normative and legal restraints. Utilizing poll data from Japanese newspapers as well as extensive interview material from Japanese and U.S. policymakers, Daniel Kliman argues that both Japanese elites and the general public increasingly view national security from a realpolitik perspective. This more aggressive view of national defense has led Japan to undertake a series of precedent-breaking initiatives, including the deployment of the Maritime Self-Defense Force, the introduction of a missile defense system, and the contribution of troops to

This is the pilot in a series of reports on strategic planning conducted within the U.S. Department of Defense. It focuses on the strategic planning responsibilities of the Chairman of the Joint Chiefs of Staff because planning at that level provides the critical nexus between the strategic direction provided by the National Command Authorities and its implementation by the unified combatant commands and military departments. The authors' thorough

Understanding of the statutory requirements for strategic planning and the interactions between the Chairman's complex strategic planning process and other key DOD planning systems enables them to explicate today's strategic planning challenges and offer insightful recommendations. Strategic planning in the post-Cold War era has proven to be exceptionally problematic. The plethora of national and international tensions that the east-west confrontation of the Cold War in large measure subdued combine now to create a world replete with diverse challenges to U.S.

interests. Equally disturbing is the fact that these challenges are not as clearly defined and easily articulated as was the monolithic Soviet threat. The authors point out that the Cold War provided inherent stability in U.S. strategic planning and that the basic elements of a strategic military plan evolved over time. They go on to argue that the elimination of the National Military Strategy Document and the abandonment of the Base Case Global Family of Operation Plans amounted to recision of the Chairman's strategic plan, and that nothing has been developed

Focuses on the challenges faced by defense-related industries and by the US Department of Defense in the post-Cold War era. This book explores the conditions they face, as well as the corporate strategies and public policies that each develops in response to these conditions and visions.

The author explores two fundamental and interrelated questions about the National Military Strategy. First, how well suited is the strategy to the needs of the post-cold War world, and

second, does the top political and military leadership of the Pentagon have sufficient control over the defense bureaucracy to make its decisions stick? The author's answer to the first question is that two of the strategy's four foundations--strategic defense and reconstitution--are beyond the scope of our resources as well as any conceivable threats on the horizon. In answering the second question, the author relates management to strategy and concludes that, as a result of the 1986 Defense Reorganization Act, the Secretary of Defense and the

"The U.S. Department of Defense (DoD) faces persistent fundamental change in its strategic and operating environments. This report suggests this reality is the product of the United States entering or being in the midst of a new, more competitive, post-U.S. primacy environment. Post-primacy conditions promise far-reaching impacts on U.S.

national security and defense strategy. Consequently, there is an urgent requirement for DoD to examine and adapt how it develops strategy and describes, identifies, assesses, and communicates corporate-level risk. This report takes on the latter risk challenge. It argues for a new post-primacy risk concept and its four governing principles of diversity, dynamism, persistent dialogue, and adaptation. The authors suggest that this approach is critical to maintaining U.S. military advantage into the future. Absent change in current risk convention, the
