This easy-to-use, easy-to-learn-from laboratory manual for environmental geology employs an interactive question-and-answer format that engages the student right from the start of each exercise. Tom Freeman, an award-winning teacher with 30 years experience, takes a developmental approach to learning that emphasizes principles over rote memorization. His writing style is clear and inviting, and he includes scores of helpful hints to coach students as they tackle problems.

“The Larkin and Peters book would be especially helpful for faculty and students outside geography who would need general information concerning concepts and trends in the field. Recommended for academic libraries at all levels, as well as large public libraries.” Choice

Chip Block, the hero of Parts, is back, and still worried about falling apart based on the things he hears. This time he’s made a list of all the strange, crazy things he’s heard people say: “I lost my head.” “My nose is running.” “I sang my heart out . . .” It’s scary stuff, but he has a plan for making sure he doesn’t accidentally leave any of his parts behind. A hilarious sequel to the wildly popular Parts and More Parts.

‘The world economy is subject to a rapidly increasing globalization, and multinational enterprises are their major driving force. This brand new book on multinationals and economic geography by two world leading economic geographers is a landmark that provides an integrated and dynamic perspective on the economic geography of the multinational enterprise. To fully understand this process of globalization, the book explains forcefully and persuasively that one needs a dynamic perspective on multinational enterprises that brings together disparate literatures on economic geography, knowledge and innovation, global network cities, and international business and management. Embedding it in modern theory of innovation and geography, the book provides not only a state-of-the-art of theories and empirics on the location of multinationals, but goes far beyond that. This book is an absolute "must-read" for any scholar and any student that is interested in multinationals and their location.’ – Ron Boschma, Utrecht University, The Netherlands and Lund University, Sweden ‘Despite often playing second fiddle to clusters in the economic geography literature, multinationals are fundamental drivers of economic development. As generators and diffusers of knowledge they have played an essential role in shaping the new world economic order. No book captures this better than Simona Iammarino and Philip McCann’s Multinationals and Economic Geography, a must read for anyone eager to fully understand the new economic geography of globalisation.’ – Andrés Rodríguez-Pose, London School of Economics, UK After more than fifty years of systematic research on multinational enterprises (MNEs) what is apparent is that there is, as yet, no unified or dominant theory of the MNE. The objective of this book is to bring into focus one particular dimension of MNE behaviour and activity that has been relatively under-researched – namely the geography of the multinational enterprise – as understood through the lens of innovation and technological change. The authors clearly demonstrate that geography is becoming increasingly important for MNEs and, in turn, MNEs are becoming progressively more important for economic geography. The pivot on which this vital relationship turns is the creation, diffusion and management of new knowledge. This unique book will prove a fascinating read for academics, students and researchers across a broad range of areas including geography, economic geography, regional science, international business and management, innovation studies, economic development. Professionals such as corporate managers and policymakers in these fields would also find this book to be of great interest.

With its 104 chapters, this Encyclopedia of aquatic ecotoxicology reveals the diversity of issues, problems and challenges that have faced, and are facing today, receiving environments. It also indicates ways by which tools, strategies and future investigations can contribute to correct, minimize, solve and prevent water quality degradation. Structured homogeneously, the chapters convey salient information on historical background, features, characteristics, uses and/or applications of treated topics, often complemented by illustrations and case studies, as well as by conclusions and prospects. This work is most suitable for teaching purposes. Academics, for example, could literally deliver comprehensive lectures to students simply based on chapter outlines and contents. Meet the Authors of the Encyclopedia! Check out 'Meet the Authors' under ADDITIONAL INFORMATION (Right menu).

Competition for industrial investment at the regional and local levels is weakening not only national borders, but also traditional assumptions and methods for analyzing the spatial distribution of industry and trade. Researchers and practitioners in urban and regional planning, geography, and economics--mostly from Europe but also the US and Japan--describe new approaches, based on such factors as the behavior of individual firms, the behavior of multinational and multiplant firms, and the influence of the local economic environment. They do not try to synthesize the various approaches, but point out the strengths and weaknesses of each in particular situations and for particular purposes. In globalising economies, particularly those going through a process of economic integration such as those economies within the EU, regions forge an increasing number of linkages with other locations within and across national borders. This is largely carried out by the technological efforts of Multinational Corporations (MNCs). This book explores the regional dimension of Europe in terms of localised technological comparative advantages and the location of innovative activities by MNCs. Using an empirical analysis John Cantwell and Simona Iammarino cover such important themes as: *MNC technological activities and economic wealth *MNCs and the regional systems of innovation in Italy, UK, Germany and France *the geographical hierarchy across European national borders.
