How to solve separable differential equations To find explicit solutions of separable differential equations, we use a technique familiar from calculus. To illustrate the method, consider the differential equation $dy/dt = 2/y$ There is a temptation to solve this equation by simply integrating both sides of the equation with respect to t .

Students learn how differential equations are formulated and interpret their meaning to applied models. A three-pronged qualitative, numeric, and analytic approach stresses how to visualize differential equations geometrically, use technology to investigate the behavior of solutions, and predict the behavior of solutions as they apply to models.

Incorporating an innovative modeling approach, this book for a one-semester differential equations course emphasizes conceptual understanding to help users relate information taught in the classroom to real-world experiences. Certain models reappear throughout the book as running themes to synthesize different concepts from multiple angles, and a dynamical systems focus emphasizes predicting the long-term behavior of these recurring models. Users will discover how to identify and harness the mathematics they will use in their careers, and apply it effectively outside the classroom. The study of macroeconomics can seem a daunting project. The field is complex and sometimes poorly defined and there are a variety of competing approaches. It is easy for the senior bachelor and starting master student to get lost in the forest of macroeconomics and the mathematics it uses extensively. Foundations of Modern Macroeconomics is a guide book for the interested and ambitious student. Non-partisan in its approach, it deals with all the major topics, summarising the important approaches and providing the reader with a coherent angle on all aspects of macroeconomic thought. Each chapter deals with a separate area of macroeconomics, and each contains a summary section of key points and a further reading list. Using nothing more than undergraduate mathematical skills, it takes the student from basic IS-LM style macro models to the state of the art literature on Dynamic Stochastic General
