This book is  
dedicated to Aristid  
Lindenmayer on the  
occasion of his 60th  
birthday on November  
17, 1985.

Contributions range  
from mathematics and

theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems.

Lindenmayer's invention turned out to be one of the most

Beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L

systems is Tmax  
continuously growing.  
For newcomers the  
first contact with L  
systems usually  
happens via the most  
basic class of L  
systems, namely,  
DOL systems. Here  
"0" stands for zero  
context between  
developing cells. It  
has been a major  
typographical problem

that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read

in the suggestive way:

DO L Indeed,  
hundreds of  
researchers have  
followed this  
suggestion. Some of  
them appear as  
contributors to this

who could not  
contribute, we in  
particular regret the  
absence of A.
