Dr. Zachary Selden provides a detailed examination of how sanctions can or cannot be used as effective tools of American foreign policy. He establishes the link between economic distortions and political behavior, with special sections on Iraq and Yugoslavia.

Economic sanctions have been used as an instrument of American foreign policy ever since the Taft administration adopted the Dollar Diplomacy. This dissertation analyzes the trade Embargo the United States imposed upon Cuba after the Revolution from different perspectives: from the political, considering the main guidelines of American foreign policy toward Latin America, especially during the

Cold War, and from the juridical, considering different perspectives of customary international law. Since the embargo was imposed only after American property had been expropriated without compensation, the dissertation analyzes the legality of expropriation, seen from the perspective of both capital-importing and capital-exporting countries, and the legality of economic sanctions as a legitimate peaceful reprisal. Due to the fact that the American embargo against Cuba is quasi-total, that is, consists of a number of different economic sanctions, it is the aim of this dissertation to analyze each of these, and finally, to assess the effectiveness of economic sanctions as an instrument of foreign policy. Many books and articles have been written about this very controversial embargo, almost as old as the Cuban Revolution itself. For the Cubans, it constitutes an "economic blockade," and a violation of Cuba's right to free trade; for the Americans, it is a reprisal for the confiscation of American property. Nonetheless, since the embargo, as stated above, is not a sanction itself but a number of different economic sanctions, it is the aim of this dissertation to analyze each of the sanctions that comprise the embargo and its legality, according to customary international law. Another aim of this dissertation is to prove why the American embargo against Cuba has only enhanced Castro's power and further centralized it. A brief chapter about the economic sanctions the United States imposed upon Chile under President Salvador Allende and the fall of his regime serves to compare the two cases with some similarities where sanctions were applied- in the first without success and in the second with success. Finally, the dissertation aims to prove that a lifting of the American embargo against Cuba is highly unlikely unless there is a change of regime in that nation of the Caribbean.

Economic sanctions are increasingly important instruments of regulatory and foreign policy. This book provides a detailed study of the post-9/11 financial sanctions programmes in the US and Europe, examining the key regulatory and legal issues that confront businesses and related liability issues for third parties and individuals.

Economic sanctions are instruments of foreign policy. However, they can also affect legal relations between private parties - principally in contract. In such cases, the court or arbitration tribunal seized must decide whether to give effect to the economic sanction in question. Private international law functions as a 'filter', transmitting economic sanctions that originate in public law to the realm of private law. The aim of this book is to examine how private international law rules can influence the

enforcement of economic sanctions and their related foreign policy objectives. A coherent EU foreign policy position - in addition to promoting legal certainty and predictability - would presuppose a uniform approach not only concerning the economic sanctions of the EU, but also with regard to the restrictive measures imposed by third countries. However, if we examine in detail the application of economic sanctions by Member States' courts and arbitral tribunals, we find a somewhat different picture. This book argues that this can be explained in part by the divergence of private international law approaches in the Member States.

This volume explores sanctions as instruments of coercive diplomacy, delving into a number of theoretical arguments and combining different perspectives from international law and international relations scholars and practitioners.

Since World War I, the popularity of using economic sanctions by western nations to influence the behavior of states not conforming to international norms has increased. The end of the Cold War renewed the zeal within the international community and unleashed a wave of new sanctions during the 1990s that earned it the "Sanctions Decade" title. Questions regarding the success of recent sanctions to influence Iraq, Haiti, Iran, and North Korea have fueled the debate among scholars and diplomats regarding the effectiveness of economic sanctions. This paper will summarize some of the key theories of economic sanctions along with criteria for successful implementation as learned from lessons. How sanctions have been applied towards Iran and North Korea will be presented along with an evaluation of their effectiveness to date. These two case studies will be examined by applying theory, practice, and historical context to evaluate and make recommendations regarding the continued use of economic sanctions to persuade North Korea and Iran to abandon their nuclear ambitions. Are economic sanctions useful in forcing the modification of a nation's behavior? Has globalization of the world's economies made sanctions ineffective except in minor disagreements? Are the US and UN left with only the military option to dissuade the proliferation of nuclear weapons? Unfortunately recent cases increasingly indicate that successful application of sanctions is becoming a rare outcome. Economic sanctions are currently the instrument of choice by western nations to influence or modify the behavior of actors deemed not meeting accepted norms set by the international community. The use of sanctions has risen to prominence exponentially since World War I, peaking in the 1990s. This paper will review the relevant theories on the application of economic sanctions as a tool of national power and their effectiveness in achieving success. The theories and lessons will be applied to analyze the effectiveness of the current

sanctions imposed against Iran and North Korea in order to identify if success can be expected by maintaining the current course. The commonalities and differences between the two case studies will be highlighted and recommendations to change implementation in order to improve the possibility of success will be provided. Economic Sanction Theory Economic sanctions represent one tool available as nations exercise their instruments of national power, generally categorized in terms of diplomatic, military, informational, and economic, to influence the behavior of other actors in the pursuit of national objectives. The popularity of sanctions has risen in the twentieth century for a variety of reasons. The scar of World War I left many with a desire of never again using military force. World War II, nuclear weapons, and the Cold War provided further incentives to find other tools beside military force. Many saw the collapse of the Soviet Union, leaving the US as the sole remaining super power, as fertile ground for increased use of sanctions.
