The relationship between strength of cultural affinity and age of acquisition was explored in Chapter 3, using implicit and explicit cultural identity tasks. We demonstrated that cultural affinity and age of second language acquisition differentially modulate implicit and explicit attitudes, indicating an interface between emotional evaluations and cultural context.

This study explored how employed caregivers experience the interface between child care, parental control and child rights in the context of Children's Homes in Ghana. The focus was on investigating caregiver perceptions of proper child care, their experiences with having to work with child rights principles and the implication of these for their relationships with the children and the care services they deliver.
