Barcoding analysis and taxonomic revision of Goliathus ...

It has been mistakenly classified as a giant cockroach by some people, but it is a pure beetle, with a genus of its own, Titanus. It is a member of the Cerambycidae family, or "longhorn beetles". Adults grow as long as 16.7 cm (6.5 in) and their mandibles are strong enough to snap a pencil in half, or cause damage to a person's flesh. – Fact Zoo. I'll admit, I'm scared of spiders and cockroaches, but I love beetles!

Baffling Beetles - Jay Snelling Art – Art by Jay Snelling

It is one of the largest species of the genus Goliathus, with a body length of 50–115 millimetres (2.0–4.5 in) in males and of 56–82 millimetres (2.2–3.2 in) in females. The body is broad and flat. Elytra are whitish with a complex pattern of black markings, and the pronotum (thoracic shield) has a large black longitudinal stripe.
