The iLLamanati have emerged from hidden places of the Earth to shed light on the dark side of human endeavors by collating and publishing literature on the secrets of the Illuminati. Representing the Grand Llama, an omniscient, extradimensional light being who is channeled by our Vice-Admiral, Captain Space Kitten, the iLLamanati is organized around a cast of interstellar characters who have arrived on Earth to wage a battle for the light. Bloodlines of the Illuminati was written by Fritz Springmeier. He wrote and self-published it as a public domain .pdf in 1995. This seminal book has been republished as a three-volume set by the iLLamanati. Volume 1 has the first eight of the 13 Top Illuminati bloodlines: Astor, Bundy, Collins, DuPont, Freeman, Kennedy, Li, and Onassis. Volume 2 has the remaining five of the 13 Top Illuminati bloodlines: Rockefeller, Rothschild, Russell, Van Duyn, and Merovingian. Volume 3 has four other prominent Illuminati bloodlines: Disney, Reynolds, McDonald, and Krupps.

The growing problem of changing environmental conditons caused by climate destabilization is well recognized as one of the defining issues of our time. The root problem is greenhouse gas emissions, and the fundamental solution is curbing those emissions. Climate geoengeering has often been considered to be a "last-ditch" response to climate change, to be used only if climate change damage should produce extreme hardship. Although the likelihood of eventually needing to resort to these efforts grows with every year of inaction on emissions control, there is a lack of information on these ways of potentially intervening in the climate system. As one of a two-book report, this volume of Climate Intervention discusses albedo modification - changing the fraction of incoming solar radiation that reaches the surface. This approach would deliberately modify the energy budget of Earth to produce a cooling designed to compensate for some of the effects of warming associated with greenhouse gas increases. The prospect of large-scale albedo modification raises political and governance issues at national and global levels, as well as ethical concerns. Climate Intervention: Reflecting Sunlight to Cool Earth discusses some of the social, political, and legal issues surrounding these proposed techniques. It is far easier to modify Earth's albedo than to determine whether it should be done or what the consequences might be of such an action. One serious concern is that such an action could be unilaterally undertaken by a small nation or smaller entity for its own benefit without international sanction and regardless of international consequences. Transparency in discussing this subject is critical. In the spirit of that transparency, Climate Intervention: Reflecting Sunlight to Cool Earth was based on peer-reviewed literature and the judgments of the authoring committee; no new research was done as part of this study and all data and information used are from entirely open sources. By helping to bring light to this topic area, this book will help leaders to be far more knowledgeable about the consequences of albedo modification approaches before they face a decision whether or not to use them.

Mules and Men is a treasury of black America's folklore as collected by a famous storyteller and anthropologist who grew up hearing the songs and sermons, sayings and tall tales that have formed an oral history of the South since the time of slavery. Returning to her hometown of Eatonville, Florida, to gather material, Zora Neale Hurston recalls "a hilarious night with a pinch of everything social mixed with the storytelling." Set intimately within the social context of black life, the stories, "big old lies," songs, Vodou customs, and superstitions recorded in these pages capture the imagination and bring back to life the humor and wisdom that is the unique heritage of African Americans.

The history of the vocoder: how popular music hijacked the Pentagon's speech scrambling weapon The vocoder, invented by Bell Labs in 1928, once guarded phones from eavesdroppers during World War II; by the Vietnam War, it was repurposed as a voice-altering tool for musicians, and is now the ubiquitous voice of popular music. In How to Wreck a Nice Beach—from a mis-hearing of the vocoder-rendered phrase "how to recognize speech"—music journalist Dave Tompkins traces the history of electronic voices from Nazi research labs to Stalin's gulags, from the 1939 World's Fair to Hiroshima, from artificial larynges to Auto-Tune. We see the vocoder brush up against FDR, JFK, Stanley Kubrick, Stevie Wonder, Neil Young, Kraftwerk, the Cylons, Henry Kissinger, and Winston Churchill, who boomed, when vocoderized on V-E Day, "We must go off!" And now vocoder technology is a cell phone standard, allowing a digital replica of your voice to sound human. From T-Mobile to T-Pain, How to Wreck a Nice Beach is a riveting saga of technology and culture, illuminating the work of some of music's most provocative innovators.

Award-winning graphic novelist Peter Kuper presents a mesmerizing interpretation of fourteen iconic Kafka short stories. Long fascinated with the work of Franz Kafka, Peter Kuper began illustrating his stories in 1988. Initially drawn to the master's dark humor, Kuper adapted the stories over the years to plumb their deeper truths. Kuper's style deliberately evokes Lynd Ward and Frans Masereel, contemporaries of Kafka whose wordless novels captured much of the same claustrophobia and mania as Kafka's tales. Working from new translations of the classic texts, Kuper has reimagined these iconic stories for the twenty-first century, using setting and perspective to comment on contemporary issues like civil rights and homelessness. Longtime lovers of Kafka will appreciate Kuper's innovative interpretations, while Kafka novices will discover a haunting introduction to some of the great writer's most beguiling stories, including "A Hunger Artist," "In The Penal Colony," and "The Burrow." Kafkaesque stands somewhere between adaptation and wholly original creation, going beyond a simple illustration of Kafka's words to become a stunning work of art.

As the Mississippi and other midwestern rivers inundated town after town during the summer of 1993, concerned and often angry citizens questioned whether the very technologies and structures intended to "tame" the rivers did not, in fact, increase the severity of the floods. Much of the controversy swirled around the apparent culpability of the U.S. Army Corps of Engineers, the designer and builder of many of the flood control systems that failed. In this book, Todd Shalatt probes the origins of the United States' oldest and largest water management agency and explores how the Corps' emphasis on scientific planning cut against the grain of a nation deeply committed to private enterprise and community rights. Combining extensive research with a lively, engaging style, Shalatt follows the technological elite of the army from European antecedents through the boom years of river building after the Civil War. He tells the story of monumental construction and engineering fiascoes, public service and public corruption, and the rise of science and the army expert as agents of the state. Information on engineering during the Civil War, the influence of women and family on the political and organizational philosophy of the Corps, and numerous historical illustrations add interesting highlights to the story. Much more than an institutional history, Structures in the Stream offers significant insights into American society, which has alternately supported the massive public works projects that are a legacy of our French heritage and opposed them based on the democratic, individualist tradition inherited from Britain. It will provide important reading for a wide audience in environmental andmilitary history, the history of science and technology, policy studies, and American cultural history.
