This book is the result of the 11 th International Conference on Information Systems Development -Methods and Tools, Theory and Practice, held in Riga, Latvia, September 12-14,2002. The purpose of this conference was to address issues facing academia and industry when specifying, developing, managing, reengineering and improving information systems. Recently many new concepts and approaches have emerged in the Information Systems Development (ISD) field. Various theories, methodologies, methods and tools available to system developers also created new problems, such as choosing the most effective approach for a specific task, or solving problems of advanced technology integration into information systems. This conference provides a meeting place for ISD researchers and practitioners from Eastern and Western Europe as well as from other parts of the world. Main objectives of this conference are to share scientific knowledge and interests and to establish strong professional ties among the participants. The 11th International Conference on Information Systems Development (ISD'02) continues the tradition started with the first Polish-Scandinavian Seminar on Current Trends in Information Systems Development Methodologies, held in Gdansk, Poland in 1988. Through the years this Seminar has evolved into the International Conference on Information Systems Development. ISD'02 is the first ISD conference held in Eastern Europe, namely, in Latvia, one of the three Baltic countries.

In the past, an organization's technical methodologies were expected to fulfill project management process needs. However, they sometimes fell short of applying what is known today as "professional project management" concepts and practices. Written by one of the nation's most highly regarded project management mentors, *The Complete Project Management Methodology and Toolkit* delineates a "business-relevant" methodology that can be introduced across different industries and business environments. The book describes the Project PRISM™ Project Management Methodology, an innovative, matrix-based approach to conducting project management that introduces relevant concepts, practices, and tools in an effective project management solution. Aligned with common business practices, Gerard Hill's method demonstrates how to develop project plans, keep on schedule, manage budgets, maintain areas of responsibility, and evaluate a project's progress from concept to completion. The text also offers insight for customizing the methodology to meet the unique needs of individual organizations. Project management has emerged as a professional discipline and is coming into the mainstream just when it appears to be most needed in the business environment. Demonstrating that project management, in many ways, is business management, the author provides an exceptional foundation for creating a fine-tuned project management practice and a relevant business solution for every organization.
