Sauroposeidon (/ s r o p o s a d n / SOR-o-po-SY-d n; meaning "lizard earthquake god", after the Greek god Poseidon) is a genus of sauropod dinosaur known from several incomplete specimens including a bone bed and fossilized trackways that have been found in the american states of Oklahoma, Wyoming, and Texas.. The fossils were found in rocks dating from near the end of the ...

~~Sauroposeidon—Wikipedia~~

The fossils were discovered in an early Cretaceous period rock layer, a time-span in which sauropods were thought to have greatly decreased in both size and number, making Sauroposeidon the one of the last great sauropod of the North American continent. When the fossils were discovered in 1993 in Atoka County in Oklahoma, their size and time of origin caused them to be missclassified as petrified tree trunks, until 1999, when a further study revealed the truth.

~~Sauroposeidon~~

This is a reference to the notion that a sauropod's weight was so great that the ground shook as it walked. The specific descriptor proteles also comes from the Ancient Greek and means "perfect before the end", which refers to Sauroposeidon's status as the last and most specialized giant sauropod known in North America, during the Early Cretaceous.

The name Sauroposeidon is a reference to the Greek god Poseidon, who while usually depicted as a deity of the sea, also held domain over earthquakes. With Sauroposeidon being such a large and heavy dinosaur weighing many tons, it was thought to shake the ground like there was an earthquake when it walked, hence the connection.

~~Sauroposeidon - Prehistoric Wildlife~~

S. proteles Sauroposeidon was a sauropod from the Early Cretaceous Period, related to the more famous Brachiosaurus. The only specimen to date is represented by four neck vertebrae. It was the tallest dinosaur known, estimated at 18 m (60 ft).
