Andrew Christopherson Gaarder was born June 16, 1818 in Gaarder, Nordre- land, Oppland, Norway. Bertha Eriksdatter Tandberg was born December 16, 1827 in Ringerike, Baskerud, Norway. They were married September 20, 1851. They had eight children. They immigrated to the United States in 1867 and settled in Highland Township, Iowa County, Wiscon- sin. Descendants and relatives lived in Wisconsin, Minnesota, Texas and elsewhere.

For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network.

Sleep is a necessary, active, diverse and periodic condition, homeostatically regulated and precisely meshed with waking time into the sleep-wakefulness cycle. The authors present a detailed and updated review of the structures involved in the phase of wakefulness, including their morphological, functional and chemical characteristics, as well as their anatomical connections

With recent advances of modern medicine more people reach the 'elderly age' around the globe and the number of dementia cases are ever increasing. This book is about various aspects of dementia and provides its readers with a wide range of thought-provoking sub-topics in the field of dementia. The ultimate goal of this monograph is to stimulate other physicians' and neuroscientists' interest to carry out more research projects into pathogenesis of this devastating group of diseases.

In the half-decade since publication of the first edition, there have been significant changes in society brought about by the exploding rise of technology in everyday lives that also have an impact on our mental health. The most important of these has been the shift in the way human interaction itself is conducted, especially with electronic text-based exchanges. This expanded second edition is an extensive body of work. It contains 39 chapters on different aspects of technological innovation in mental health care from 54 expert contributors from all over the globe, appropriate for a subject that holds such promise for a worldwide clientele and that applies to professionals in every country. The book is now presented in two clear sections, the first addressing the technologies as they apply to being used within counseling and psychotherapy itself, and the second section applying to training and supervision. Each chapter offers an introduction to the technology and discussion of its application to the therapeutic intervention being discussed, in each case brought to life through vivid case material that shows its use in practice. Chapters also contain an examination of the ethical implications and cautions of the possibilities these technologies offer, now and in the future. While the question once was, should technology be used in the delivery of mental health services, the question now is how to best use technology, with whom, and when. Whether one has been a therapist for a long time, is a student, or is simply new to the field, this text will serve as an important and integral tool for better understanding the psychological struggles of one ' s clients and the impact that technology will have on one ' s practice. Psychotherapists, psychiatrists, counselors, social workers, nurses, and, in fact, every professional in the field of mental health care can make use of the exciting opportunities technology presents.

The first text designed specifically with clinical practitioners in mind, Functional Neuroimaging demonstrates the clinical application and utilization of functional neuroradiology for early diagnosis, neurological decision-making, and assessing response to cancer therapy. Edited by the Founding President of American Society of Functional Neuroradi

Transcranial Sonography in Movement Disorders
