The sensitivity principle is a compelling idea in epistemology and is typically characterized as a necessary condition for knowledge. This collection of thirteen new essays constitutes a state-of-the-art discussion of this important principle. Some of the essays build on and strengthen sensitivity-based accounts of knowledge and offer novel defences of those accounts. Others present original objections to sensitivity-based accounts (objections that must be taken seriously even by those who defend enhanced versions of sensitivity) and offer comprehensive analysis and discussion of sensitivity's virtues and problems. The resulting collection will stimulate new debate about the sensitivity principle and will be of great interest and value to scholars and advanced students of epistemology.

This collection of essays and reviews represents the most significant and comprehensive writing on Shakespeare's A Comedy of Errors. Miola's edited work also features a comprehensive critical history, coupled with a full bibliography and photographs of major productions of the play from around the world. In the collection, there are five previously unpublished essays. The topics covered in these new essays are women in the play, the play's debt to contemporary theater, its critical and performance histories in Germany and Japan, the metrical variety of the play, and the distinctly modern perspective on the play as containing dark and disturbing elements. To compliment these new essays, the collection features significant scholarship and commentary on The Comedy of Errors that is published in obscure and difficultly accessible journals, newspapers, and other sources. This collection brings together these essays for the first time.

Avicenna is the greatest philosopher of the Islamic world. His immense impact on Christian and Jewish medieval thought, as well as on the subsequent Islamic tradition, is charted in this volume alongside studies which provide a comprehensive introduction to and analysis of his philosophy. Contributions from leading scholars address a wide range of topics including Avicenna's life and works, conception of philosophy and achievement in logic and medicine. His ideas in the main areas of philosophy, such as epistemology, philosophy of religion and physics, are also analyzed. While serving as a general introduction to Avicenna's thought, this collection of critical essays also represents the cutting edge of scholarship on this most influential philosopher of the medieval era.

The Nonodoxy is a philosophical disquisition comprised of fifty-nine discourses studying the topics of knowledge (epistemology) and morality (ethics). The Nonodoxy is organised as the ninth disquisition of the treatise known as The Omnidoxo, the founding text of the philosophy of Astronism solely authored by Cometan. The Nonodoxy is the founding disquisition of Millettarian/Astronic ethics and epistemology with some of its key contributions including the notions of bromition, cosmospectivity, uniuqitarianism, and Millettarian social teaching. A major segment of The Nonodoxy is dedicated to the study of centralities and incentralities that are tied to certain emotions which provide readers with an understanding of how Astronism considers such emotions and the consequences of those emotions on people's personalities and interactions.

A comprehensive introduction to the theory of knowledge.
